Dec 1989 • Romanian

Backend engineer who loves diving into all aspects of software development. From APIs to infrastructure, I enjoy building robust systems end-to-end.

Technical Proficiencies

Languages: Ruby | Elixir | JS/Node/TypeScript | PHP | Java
Frameworks: Rails | Phoenix | Symfony | Spring Boot | Next.js | NestJS
AI Tooling: Claude Code | Cursor | opencode | MCP

Career Experience

Remote, Netherlands — 2026 – Present

Senior Software Engineer

- Develop features end-to-end across an Elixir/Phoenix backend and a React/TypeScript frontend, backed by PostgreSQL and Oban background jobs
- Build and maintain integrations with third-party US payroll and e-signature providers, covering company and employee provisioning, tax setup, payroll runs and online notarization
- Investigate production incidents and fix performance, concurrency and data consistency issues using Sentry, Snowflake and PostgreSQL query plan analysis
- Work AI-native with Claude Code, Cursor and opencode, running parallel agent sessions in isolated git worktrees and local environments from investigation to merge request, extended with custom skills and plugins
- Delegate work to cloud agents and set up agent loops and automations in tools like Linear, Notion and Gemini
- Connect AI agents to engineering tools through MCP (Sentry, Linear, Snowflake, Notion, Slack) for faster incident triage, data analysis and code review

Mollie, Netherlands — 2024 – 2026

Senior Software Engineer

- Participated in designing and implementing a solution for card details tokenization
- Implemented a solution for securely importing and exporting card details
- Implemented a solution for managing point of sale terminals configuration and their software updates and customization
- Setup billing and subscription management for charging transaction fees as well as for charging fees for the usage custom billable products
- Direct communication and perform debugging during incidents, propose scalable solutions for gradual rollouts
- Implemented end-to-end general performance and query optimizations

WeTransfer, Netherlands — 2021 – 2024

Senior Software Engineer

- Develop "backend for frontend" for https://portals.wetransfer.com
- Deliver consultancy service to wetransfer engineers on creation of GraphQL API for supplement or replacement of prior set of REST APIs
- Generate PoCs for evaluation of multiple API gateway solutions, including tyk, kong, aws appsync, and apollo
- Optimised system reliability and performance through implementation of monitoring and observability solutions via utilisation of Datadog
- Minimised overall downtime and improved database availability by implementing the online schema change approach using gh-ost
- Successfully upgraded monolith from ruby 2.7 to 3.2 and rails from 5 to 6, whilst preparing the app for rails 7

Currencycloud, Netherlands 2021
Senior Software Engineer

- Leveraged multiple tools and frameworks, including rails, nextJS/react, graphql, RabbitMQ, elasticsearch, NodeJS, Ruby, k8s, datadog, wiremock, pact, and playwright
- Formulated efficient technical standards and guidelines for ruby guild company-wide
- Enabled end-to-end testing for newly built features, whilst setting-up preview environments for testing new apps
- Optimised docker images for speed improvement of building, security, and occupied space
- Conducted training sessions and sponsored junior engineers for driving growth in skills and careers

Impraise, Netherlands 2020 – 2021
Senior Software Engineer

- Implemented templating engine that allowed setting-up of recurring surveys and questionnaires
- Implemented scheduler to run recurring events as well as implemented service for tracking surveys and questionnaires stats and generating reports
- Utilised different tools and frameworks, including rails, react, graphql, grpc, RabbitMQ, NodeJS, Ruby, Elixir, k8s, and datadog
- Optimised queries performance through batch loading for relieving db stress and speed-up responses

Lumos Labs (Lumosity), US 2019 – 2020
Senior Software Engineer

- Maintained and upgraded out-of-date ruby as well as js dependencies
- Utilised accessibility features and adapted landing pages

Aejis, Ukraine 2019 – 2020
Senior Software Engineer

- Migrated a static web page pertaining to a single individual into rails application with integrated payments system
- Incorporated admin interface with activeadmin and possibility for easy addition of other individuals' pages with their own independent static pages, stylesheets, js, and billing/aws configurations
- Managed integration of stripe payments api to allow subscriptions and one-time donations

Endava, Moldova 2018 – 2019
Senior Software Engineer

- Conducted mentoring sessions for junior/mid-level ruby developers to unlock internal potential
- Implemented notification system; sending Backend emails with attachments, sending iOS, and android push notifications using firebase, creates events in users' calendars using azure api
- Implemented permissions system, region restricted, and public/private events with personal invitations
- Implemented new data-driven mechanism of requests routing through the platform
- Implemented quoting/trading apis using REST APIs of American bank
- Managed addition of numerous elasticsearch aggregators to transaction monitoring service

Salt Edge, Moldova 2013 – 2018
Lead Engineer

- Orchestrated interviews of dev candidates and coaching sessions for newcomers as well as helped during onboarding process, tasks delegation, and performance evaluation
- Steered implementation of 100+ adapters for numerous banks by leveraging web driver, APIs, and file parsers
- Headed configuration of GitLab CI/CD and setup pipelines for ruby/rails applications
- Led high-performance team comprising five developers
- Conceptualised white-label solutions for banks allowing networking to core banking to services and exposed various different variations of public PSD2-compliant APIs
- Built APIs for financial information extraction and payments initiation

Fusion Works, Moldova 2012 – 2016
Ruby Developer

Education

Moldova State University, Moldova 2012 – 2014
Master's degree, Networking Technologies

Moldova State University, Moldova 2009 – 2012
Licenciate degree, Informational Management
